

Figure S8 Expression of NF90 in Ovarian Caarcinoma Tissue Samples. **(A)** X-tile analysis was employed to determine the cut-point for NF90 expression in a cohort of 169 ovarian cancer patients. The cut-point (H score=40) is indicated by the black circle on the horizontal axis. **(B)** Histogram of the cohort showing the cut-point for NF90 expression. Low NF90-expressing patients are shown in blue, high expressing patients are shown in grey. **(C)** Representative IHC images showing high (top panel), medium (middle panel) and low (bottom panel) expression of NF90 in tumor tissues of ovarian carcinoma patients from the cohort.
